-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Norton '532 in view of Cook '454, Dorsch '286 or Walker '964. Norton discloses a cultivator (figures 1-6) comprising a lower frame (generally 14) having a front and a rear, two wheels (63,64) attached to the front of the lower frame (as seen in figure 1), an upper frame (as seen in figure 1, area of reference numeral 23) attached to the lower frame and extending rearwardly; and, "J" shaped tines 50 with plow elements and cutting points/edges (as seen in figure 2) attached to the lower frame (via stabilizer span/cross brace 47), the edges appearing to contact the surface at an angle less than 20 (as best seen in figure 1). Further, Norton shows the upper frame terminating at handle assembly 30 and the tines being arranged in staggered rows (as best seen in figures 1 and 3) but fails to show the plow elements comprising two portions which meet at a cutting edge. However, Cook, Dorsch and Walker all show plow elements having two portions meeting at a cutting edge (Walker, element "I"; Cook, element 4 and

Dorsch, elements 16 &17) used in concert with cultivator type tools. It would have been obvious to one having ordinary skill in the art at the time of the invention to provide the tool of Norton with the plow elements as taught by Cook, Dorsch or Walker in order to provide a cultivator having greater operational range and effectiveness.
